ournal.info/editori al,board.p hp tss\$ " HX./t5"i5; rbs International Journal of Advances in Management and  
Economics Available online at www.managementjournal.info &ESEARCH AH, TXCLfi Modelling the Nexus  
between Students' Personnel Services and Academic Achievement in Secondary Schools: A Partial Least  
Square (PLS) Approach Zahyah Bt Hanafi, Yusuf Suleiman\*, Muhajir Bin Taslikhan School of Education and  
Modent languages, Uniueriti Utara Malaysia, Malaysia.

This study examined the nexus between student personnel services (l-realth, guidance and counselling, and  
library services) and academic achievement in secondary schools with the particular interest to know the  
significant impact of these services on students' academic achievement. Students' personnel services are  
regarded as the cornerstones because o'i'ts undisputed role they' play in ensuring smooth implcmntation of  
the schosll" programs. Mcthodclcgically, this stu\*3r is quantitativc in naturc and adopted a correeiation survey  
method.

Instrument titled: Students' Personnel Services Questionnaires (SPSQ) were adapted from the previous  
studies. Stratifed and sampling techniques were emplo-ved to select the respondents for the studSr. A set of  
questionnaire Vere distributed to 235 students in selected secondary schools in Ilorin South Local  
Government, Kwara State. Secondary data were used to measrlre the academic achievement.

Statistical Package for Social Science (SPSS) and Structural Hquaiion Modccling (Smart PLS) ivrcrc uscd ta  
analyzc thc collectcd data. Thc rcsults in this study rcpotced thc existence of a relationship between health  
services, guidance and counselling services, library services and students' academic achievement. Thus, it  
can be concluded that when health selvices, guidance and counselling servicc and library services are well  
provided, it wor,rd enhance students' academic performance. This indicates that student personnel scrvices  
are an indispensable service and are very crucial to the attainment of secondary education.

It is recommended that the provision of students' services should h, e grrided by tlee reeds and aspir:ations of  
the -schools aaid students coitcemed. Lastl3'. The implementation of the school programs should be given  
uLmost priority so bhat it can benefit students rvho are the beneficiaries the services provided in the school.  
Keywords: Students' Personn,el Seruices, Library Seruices, Healtht, Seruices, Guidan.ce und Counselliltg  
Seruices, At:ade nric Achieu ement. -iilLi i' ia-ti. r l L' i i, i, j.

Education throughout the world has been developments are increasingly driven embraced because of the  
notion that it does through the advancement and application of not only raise the social status of the  
knowledge [2]. Students' personne] services individuals that acquired it but also is one of the major concepts  
in education and i.mproves their financial status. It is a lang most especially in erluccational :.management term

investment that a society can have as it because student personnel services is the greatest force that can be used to contribute significantly to the success of bring about change, Education is also the students in terms of their academic gr:eatest investment that a nabion can make performance in school [3,4].

These are for the quick development of its economy, essential services that are provided in school politics, social and human resources t1]. to enhance the performance of the students Globally, it is trrieved that through the in their academic pursuit. Such services are process of education, the individuals are very important because the availability of prepared to become useful and acceptabie these services make the school realizes the member of the society.

In preparing goals they need to achieve and the non- individuals for useful living, the school as a availability or inadequate of these se.rvices social institution has a great responsibility may make the goais of the school to be a of educating the member of its society. It is mytir l5]. The administration of student generally assumed that economic and social personnel services is an integral part of l ,rqua if e\*s\* {}m {. \*e aE wwm .managementournat,tntro school administration, but quite distinct from instructional work and yet very essential in the school.

In the school system, adequate provision of student personnel services is often seen as a correlate of students' academic performance. It also promotes good atmosphere for effectiveness in education [6,7]. The school] eannot exist urithout these services because it plays a vital role in enhancing the achievement of academic excellence of the students. It is often regarded as the pillars that enable the schoal to stand and if these pillars fall, it will collapse other sub-systems in the school t3l, Problem Staternent According to West African Examinations Council (WAEC) results released in the year 2014, it showed that 31.28% of Nigerian secondary school students obtained five credits and above (including Mathematics and English language).

The foregoing results revealed that academic performance of the students is below average. Only 31% of those who passed are qualified tc seek admission into higher institutions. Stakeholders in the education sector opined that dearth of facilities could be responsible for the low performance of students. There are divergent views, some say that it is due to lack or unavailability of facilities that contributed to the dismal performance of students at ali levels of education (Primary, Secondary, and ?ertiary Institution).

If this is true and if the death of facilities in the schooi system is not addressed, it will continue to have a negative impact on the academic performance of students [8]. Thus, studies were conducted on school services to examine whether it has arl impact on students' academic performance and what are the services that helps to improve students' learning.

However, past studies show that student personnel services were mostly measured with one dimension [9,10J, while others measured it with two dimensions [3,11]. Also, previous studies have not used needs

theory which explains that the existence of school services influences academic achievement. Furthermore, most of these studies were conducted in Europe and America and fewer still in Africa. Thus, this study would like to address all these issues by examining the nexrls between student personnel services and academic achievement in the Nigerian eontext.

Therefore, a research question was formulated: Is there any relationships between guidance and counselling services, library services, health services and academic achievement? In addition, this study hypothesized that there are positive relationships between these variables Literature Review Students' personnel services can be defined as the fundamental services which are provided by the school for the main purpose of enhancing the teaching and learning activities in the school system. The services are closely related to the content of the school curriculum [12]. These services are meant for the comfort and the improvement of students' life [13].

However, there are various dimensions of student personnel services. Basically, three types of services were used for this study. The services are; health services, guidance and counselling seryices and library services. However, previous studies have discussed. the impact of students' services on academic achievement. These studies confirmed that services are expected to be provided by the school from the comforb of the students and their academic fulfillment [3, 14].

For instance, Baker-Tate [15] explained that the concept of student personnel services could be said to be derived from the theory propounded hy scholars like Abraham Nfaslow, Douglas McGregor, Frederiek Hersberg and Chris Argrs. The theories provide these needs in the hierarchy of importance [16]. Moses [11] used the university as the foeus of his study and stressed that student personnel services were necessary to support the core business of the school. He averred that the students' services in school include library, health, guidance and counselling services, accommodation and transport service.

Lewis [3] on the other hand, conducted on students' services and educational leadership in secondary schools and found that students' services in school were very essential in any educational system. Heatth Services can be defined as one of the seervices provided to help improve the health status of the students in school [].71. School health services offer primary health care services to the entire student population in :'.',: :...t.: r.,i::ri1.r'- WIA,W,managemgnuOufnal,Info the school so as to support their academic performance [18,19], care for students' health 120-221and their wellness in terms of their chronic illness and other diseases that often arise in the soci.ety, and is meant to take eare of both staff and the students while they are in the school premises [23].

Thus, school health centers need to store enough drugs and equipments to attend to the students [20-22] as well as enable the health service personnel to carry out their functions efficiently and e{fectively 1241. These services would go a long way in ensuring the students attain their educational objectives. It was found to have

*a positive relationship between health services and academic performance as it takes care of the well-being of the students [10] and thus needs to be established in the school programs [17].*

*There are others who believed that health services should be provided from infant age as it was found to correlate their academic performance by the time they enroll for school [24], academic performance of students increased when health services were provided for them [23] as it ensured that students were exposed to good learning conditions in the schools [25,26]. Thus, students must be attended to from time to time by the school clinic to help proffer solutions to their health problems [18] as the state of health of students seemed to be determined by their academic performance in schools.*

*Guidance and Counselling Services are another essential component of student personnel services in school. It can be defined as the process of assisting an individual student to fully understand himself. It is a service provided by using a series of counselling techniques to solve the contemporary issues bordering on students' behavior [27-29] and also to solve the specific problem that focuses on relationship between students' ability and academic achievement.*

*There are categories of counselling programs that are prominent in the education system. Examples of counselling programs are; career and placement service, vocational service, information service, follow-up service and referral service [30]. The functions of these services are to provide counselling services to students experiencing social and emotional problems, assist students suffering from bad habit to deal with their problems, advise school management on counselling related matters, to assist the students to adjust well to the school system and provide consultation service to teachers to help deal with students in the classrooms [26].*

*The counselling services that are common in schools are an information service, evaluation service, career and placement service, and vocational service [31]. Information service has relevant information about the students to enable the school counselors to know much about the students in school. Thus, this will be a guide to the counselors on how to solve the numerous problems confronting the students. Evaluation service on the other hand, has to do with examining the guidance services provided with a view to know the weaknesses and strengths of the services.*

*Also, career and placement service has to do with counselling, advice for jobs, while vocational service encapsulate counselling, advice on vocational services for students which include arts, entrepreneurship, etc. Studies have shown that guidance and counselling services were found to have a positive impact on students' performance as they are seen as tools for educational processing (Blakely, 2009) which leads to better academic performance [27-29,327], solve juvenile delinquency among students in the school environment [30] as well as help students in the area of their career.*

Thus, the presence of counselling services would definitely improve the academic skills of the students [33-35] and in addition it was proposed that school counselors must be aware of their role in helping the students in school socially, psychologically and morally so as to enable them to excel in their academic endeavors [31]. Library Services is another important component of student personnel services in the school system. It is a service established to implement the policies and programs of the education system.

The library can be defined as the place where series of information that enriches knowledge can be found. Thus, it is designed and meant for improving the reading abilities of the students as well as a place for self-improvement and resources [36]. As such the school library needs to be filled with journals, newspapers, magazines, textbooks, novels and other relevant materials that are useful for learning purposes [37].

Therefore, the main purpose of the school library is to enhance the reading culture of the students so that they can perform well in school. To ensure the school has a good library it should be headed by a competent and qualified librarian to run the activities in the library [36]. However, this is not possible, especially in poor countries such as Nigeria. It is argued that virtually all the secondary school libraries in Nigeria are currently in the state of comatose [4].

The school library has also proven to be a contributing factor to students doing well in school [38,39]. It was found to assist students in their choice of books and other materials for learning purposes provides aesthetic experience and develops a sense of appreciation in students, develops students' skills and resourcefulness so that they can make profitable use of the library. Furthermore, going to the library may cultivate the habit of individual investigation, encourage lifelong education through the subsequent use of library resources and provide experience in social and decent living [4].

Besides the services, librarians play a role as they assist the students to make use of the library; search for materials to enhance their academic activities in school [9]. As such, it was proposed that all library personnel need to educate students more on the importance of using the library [6,39,40]. To what extent is the level of provision of guidance and counselling services, library services and health services in the school? . Is there any relationship between guidance and counselling services and academic achievement? . Is there any relationship between library services and academic achievement? .

Underpinning Theory of the Study Needs

Theory The most popular and universally accepted theory of motivation can be attributed to Abraham Maslow theory of needs [3]. Within every human being, there are basically five needs that human being wants in 1ife. Those needs are arranged according to its importance. The needs follow in sequence and r, when one need is satisfi.ed, it decreases in strength and the higher need then dominates the behavior. Therefore, a satisfied need is no longer a motivator.

Specifically, there are five basic needs that motivate human being; they are psychological needs, safety needs, social needs, esteem and self-actualization need [41]. Relating these needs to the school system implies that, the hierarchy of needs as postulated by Maslow is in tandem with the student personnel services which are needed in sehool tbr students to excel. For example, guidance and counselling, library, remedial program and orientation services can be categorized under self-actualization.

Recruitment, sports, evaluation and assessment falls under seif-esteem, while student unionism, club and religious activities eneompass social needs. ALso, security guards, fire extinguishers and discipline are under security needs, while health, accommodation, food and water are under psychological needs 1421. The following are hierarchy of needs that are closely related to the students' services in the school: . Self-Actualization- Guidance & Counselling and Library Services . Esteem Needs - Sports and Admission Services .

Social Needs-Student Union, Club and Religious Activities r Security Needs -Security Guards and Fire Extinguishers . Psychological Needs- Accommodation,Health, Food and Wate Source: Abraham Maslow and Herzberg [41] ,t;i l i . i . ; ; i i l ; i r ,r:tt. This stud;, adopts a quantitative paradigm in investigating the relationship between the independent (student personnel services) and dependent (academic achievement) variables of the stud;r. The population for this study consists of secondary schools' students in Ilorin South Local Government, Kwara State, Nigeria.

In this study, stratified and simple random sampling techniques were used to select 235 Senior Secondary Schools' students which were used as respondents for the study. Two sources of data furimary and secondary data) were used. Questionnaire tagged "Students' Personnel Services Questionnaire" (SPSQ) was developed to elicit data from the students, while their results in their last term examinations' subjects (l/mathematics, English Language, Biology, Geography and Economics) were used to measure their academic achievement.

The items in the questionnaire were adapted from the previous studies and those items were modified to suit the purpose of the study. The instrument has four Likert scale ranging from Strongly Disagreed=1, Disagreed=2, Agree=3, Strongly Agreed=4. The 44 survey items used are displayed below in Table 1. In order to ensure content validity of the instrument, experts in the field were given the questionnaire for their constructive suggestions.

Two softwares were used for the study, Statistical Package for Social Science (SPSS) was used for the screening of the data. The data screening includes missing values and the normality of the data so as to ensure non-distortion of the analysis. Partial Least Square (PLS) was employed to test the model of the study. Permission from the principal of the school was sought before administering the questionnaire to the students. The principal was briefed on the purpose of the study.

He approved to allow the school and students to be used as respondents in the study. The questionnaire was then distributed to the students with the help of two teachers in the school. Data Analysis Statistical Package for Social Sciences (SPSS) was used to perform the initial screening of the data collected. Thus, the software was used to know the missing value analysis, assessment of outliers as Table 1: Construct and their sources Construct items Sources Guidance and Services It Parsat et al., [a3] Library Services 16 Arinde, [44]; Owate & Iroh Health Services Parsad et al., [4,3]; Tornat J4safie et al., [5]; wmir.managementjournal.info well as the normality of the data. The software was also used to know the profile of the respondents.

Hair, Sarstedt, Ringle and Mena [47] opined that researchers should perform the initial screening of the data to avoid kurtotic or highly skewed data because it can cause inflation the standard error estimates after bootstrapping, which could undermine the significance of the path coefficients. However, In order to test the Table The above Table 2 shows the profile of the respondents used for the study. The gender in column 1 shows that most of the respondents are female (132), which account for 56.20%, while male respondents are 103, which account for 43.8%.

Column 2 revealed that most of the respondents in the study are from a commercial class (112), which account for 47.70%, Arts class (83 respondents), which yields 35.3%, and science class (40 respondents), which have 17%. Also, column 3 in the table shows that the majority of the respondents are Muslims (187), which is 76.6%, while Christianity (68 respondents), which is 28.9%. Lastly, the table revealed that the age of the majority of the respondents (180) falls within the age bracket 15-17, which account for 76.6%, while age between 17 and above (55 respondents) is 23.4%. Table 3: Descriptive statistics for late hies Table 3 indicates that the overall mean for this study falls between 2.634 and 3.057. Regarding the level of guidance and counselling services in the school system, it shows that mean is 3.057 while standard proposed model, Smart PLS (version 2) was used for inner and outer model for the purpose of analysis [a8].

In view of its configuration, the software is free from any assumption in term sample size, multicollinearity,

normality, missing values, assessment of outliers, etc. The adapted instrument was subjected to reliability and construct validity test to ensure suitability. deviation has .758- This means that provision of guidance and counselling services is high as expressed by the respondents. On the level of library services in the school system, results show that the Descriptive Statistics of the Latent Variables The descriptive statistics of the latent variables were determined to establish the level of provision of guidance and counselling services, library services, and health services in the school system.

In order to achieve this, descriptive statistics in the form of mean as well as standard deviation were calculated. Specifically, latent variables such as (i.e., guidance and counselling, library and health services) in this study were measured by using four- point scale as discussed in the methodological parts of the study. For easy understanding of the descriptive statistics of the latent variables, the four likert scale (i.e., 1=strongly disagree to 4 strongly agree) were classified into three groups, namely, low, moderate and high respectively as suggested by many researchers [49].

2: Profile of the re Item Description Frequency Percentase (96) 1. Gender Male 103 43.8 Female 56.2 - Total 235 100 2. Class for Commercial 112 46.7 Arts 47, 19.1 Science 40 17 Total 235 100 3. Religion Islam 167 ? 1.1 Christianity 68 28.9 Total 235 100 4. Age 15-17 180 76.6 17 and above 55 23.4 Total 235 100

Latent Constructs Mean Standard Deviation Guidance and Counselling Services 3.057 .758 Library Services 2.726 .386 Health Services 2.634 .394

WIA, W, management] Jurnal. tnto mean is 2.728 while standard deviation has .386.

It has established that the provision of library services is moderate in the school system as posited the respondents. Lastly, for health services, mean is 2.634 with standard deviation of .394. It indicates that the provision of health services is moderate. Reliability: All the independent constructs in this study are reflective; therefore it is pertinent to ensure that the measurement model of this work is assessed for internal consistency. In testing the internal consistency of the model Fornell's composite reliability was used [50] where the composite reliability

that is more or greater than 0.7 which is in line with this study is good enough for composite reliability of the model. The Average Variance Extracted (AVE) is set for more than 0.5 as recommended by Fornell and Lacker [51]. This would mean that over 50% of the variance of the measurement items is explained or accounted for by the latent variables. Composite reliability and the Table 4: F The Table 5 above shows that the results of the Average Variance Extracted (AVE) with calculated Average Variance Extracted (AVE) of all constructs have values that are more or greater than the suggested criteria as displayed in Table 2 Construct Validity: According to Chin et al.

[52], construct validity can be defined as the degree or extent to which a test measures what it is supposed to measure. Convergent validity can be described as the measure of constructs that should be theoretically

associated, while the discriminant is the measure of constructs that should not be connected theoretically. Convergent validity and discriminant validity are subtypes of construct validity simply because they work interdependently as one alone is not sufficient to establish construct validity [5]. However, it has been established that item loadings that are more or greater than 0.50

are acceptable for convergent validity and this is established in the current study as displayed in Table 4. As displayed in Table 1-, all the indicators loaded on their respective constructs are from the lower bound. coefficients that range from 0.5368 to 0.6785 indicate that all the constructs, convergent 4: factor and Academic Performance Guidance and Counselling Services Health Services Libraru Services AA2 0.7c74 0.5922 0.5113 0.134112 ,AA3 0.7152 0.3503 0.4.435 0.3003 AA4 0.6894 0.541r1 0.4171 0.2207 .dAs 0.1242 0.5183 0.3686 0.1882 GS2 0.6192 0.9053 0.4497 0.3746 Gsr1 0.4:151 0.6959 0.115 i)=41116 GS4 0.635 0.8554 0.4a2 a.5654 HSt 0.3381 0.439 0.G142 -0.1527 ris? 0.3611 0.1964 0.7095 -0.0633 HS8 0.5792 0.375 0.8468 0.31 95 LSI 0.3855 0.3705 0.0865 0.6243 LSIO 0.2462 0.3955 0.0005 0-?873 LS11 0.4134 0.41?8 0.0927 0.8594 LS9 0.3145 0.5011 0.1444 0.8052 Table 5: Con and reliabil Guidance and Counsellig

Services validity has been established. Moreover, the table also revealed the composite reliability with values ranging between 0.7897 and 0.8622. In this study, the composite reliability is used instead of cronbacir"s alpha because of the fact that it is sensitive to the number of items in the scale and therefore underestimates the consistency of the internal reliability. Therefore, looking at the The diagonal elements are the square root of Average variance Extraction (AVE). In the light of the results displayed in Table 5, it has been discovered that  $H_1$ ,  $H_2$  and  $H_3$  are supported. Discussion It has been confirmed empirically that there are aspects of students' personal services that can influence the academic achievement of students in school. Previously, it has been said that past studies have discussed one of these aspects as a correlate of academic achievement. This study focused on three aspects of student personnel services rather than one as done in previous research.

As hypothesized earlier in  $H_1$ , the impact of guidance and counselling services on academic achievement was found to be positive and significant ( $B=0.444$ ;  $t=4.754$ ;  $p<0.018321$ ). Previous studies have also corroborated the current findings [27,28,32]. This shows that the presence of guidance and counselling services is akin to the development of the school system and therefore the provision of functional guidance and counselling service is a vital tool which is needed for students in school.

It is imperative to note that through counselling services, students would be able to choose the right path in making good decision about their career. This can be achieved through employing qualified counselors to man the counselling unit. The counselling unit must be well furnished by the school for smooth running of counselling services in the unit. The more the availability of effective counselling services, the better for the academic success of the students in their academic endeavors.

Also, as hypothesized in  $H_2$ , the impact of health services on the academic achievement of students in school was equally found to be significantly positive ( $B=0.3879$ ;  $t=5.7838$ ;  $p<0.011601$ ). This finding is in line with earlier findings [18, 24,25]. This indicates that 'health is wealth'. The importance of health service is enormous in the school system. Apart from the fact that health is one of the most essential services in the school, it is a necessity service needed for the activities in the school. This research has shown that when students are healthy, it puts them in the right frame of mind so that they can be physically, emotionally and psychologically prepared for classroom activities. Besides this, provision of functional school clinic helps to minimize and avoid casualties and unforeseen negative happenings in the school premises.

The onus lies on the school administrators to be alert in discharging their tasks towards ensuring effective health care delivery in schools. The last hypothesis  $H_3$ , the impact of library services and academic achievement was significantly positive ( $B=0.1936$ ;  $t=2.103$ ;  $p<0.043747$ ). The finding is in tandem with the previous findings [6,38,40]. Library service is crucial to the attainment of the school's goals and objective. Having a functional library is a way of equipping students with learning materials to up-date their knowledge in

terms of searching for additional materials for their schoolwork.

Based on this study, the findings on the relationship between student personnel services and academic achievement in secondary schools have contributed theoretically, practically and methodologically to the body of knowledge. From a theoretical perspective, the study has validated the needs theory propounded by Abraham Maslow, which says that if certain needs are provided for students, it would spur them to academic success. The more they have their needs provided, the more their positive achievement in their examinations.

From a practical perspective, this study would serve as a guideline on how school services should be provided by the school for the development of students' learning. From a methodological perspective, previous studies conducted on aspects of students' services used SPSS software in the analysis. To the best of my knowledge, it can be said this is the first research to be conducted in this area using the Smart PLS software. From the foregoing discussion, the results in this study reported the existence of a relationship between health services, guidance and counselling services, library services and students' academic performance.

Based on the findings of this study, it is clear that there is a significant relationship between student personnel services and academic performance. Thus, it can be concluded that when health services, guidance and counselling services and library services are sufficiently provided, it would enhance students' academic performance. This indicates student personnel services are indispensable services and are very crucial to the attainment of successful learning.

It is obvious that the importance of student personnel services on students' academic performance in school cannot be over emphasized. This has given a high impetus to the National Policy on Education that states: "The connection between the school and the community is a seamless connection." (Egbo B (2011) Teacher capacity building and effective teaching and learning: a seamless connection. Mediterranean Journal of Social Sciences, 2(5):1-7. 2. Federal Republic of Nigeria. (2004). 4th Ed. National Policy on Education. Lagos, Nigeria. 3.

PNLA Quarterly: the official Publication of Pacific Northwest Library Association. 7 5(3):247 -253. student personnel services facilitate the implementation of educational policies for the effectiveness of the educational system [2].

It is recommended that the provision of students' services should be guided by the needs and aspirations of the schools and students concerned through budgetary allocation allocated for the provision of students' services in school. In addition, it would also help to include other stakeholders in the study, such as parents, teachers, and school administrators to further improve the type of students' services in their respective

schools. More policies should be provided to support the provision of students' services in the school.

Future studies should examine other aspects of student personnel services either at the preschool, primary or even at higher institutions of learning to identify whether these students' services will have an influence on students' academic achievement. This will help to identify which students' services are more appropriate and for which level. There is a need for all students' personnel service providers in school to collaborate so as to ensure efficient and effective service delivery to the students as this will enable the students to reach their full potential. Since the scope of the study is limited to secondary schools in Ilorin South Local government in Kwara State, future research should look at the relationship between the variables used in the Kwara State, and Nigeria if possible.
